

# MSSL20WD | 20W Solar Street Light Double

Our street light systems are ideal for lighting streets, roads, carpark areas and perimeters. Built-in solar controller - set to run 100% for 6 hours then 70% for remainder of night Battery Capacity and type: 14.4V Lithium Battery Charge Time with full sunshine: 3 Hours Light: SMD – Cool White 5K Light Coverage: Approximately 15m x 8m Pole spacing: 20M. Pole Height 4 - 6m Hardware: Includes all steel bracketing, battery, light, solar panels, controller and all nuts and bolts required for installation. Pole not included.

## Luminaire

Luminaire Power	40,00 W
Lumen	6 400
LED Type	
LED Name	
Lens	
LED Temperature	
Beam Angle	
Coverage	
CRI	

## Battery

Chemistry	
Amp Hours	
Watt Hours	675
Cycles	

## Solar Panel

Panel Total W	160
Panel Voltage	
Panel Current	

## Controller

Controller Type	
Controller Size	
Controller Program	
Controller Protections	
Controller Sensor	
Operating Temp	
IP Rating	

With the battery neatly concealed within the solar panel bracket, installation is quick and easy. The only real considerations are aiming the light and panel in the desired directions.

## Installation

Mounting Height	
Pole-to-Pole	
Pole Top Size	101
Power Box Type	MB-67-D
Steel Description	
Warranty	
Pole or Base	Not Included

In order to protect against corrosion, all metal used in our products is either galvanized steel or aluminium. The steel is powder-coated with a 'structure'UV resistant epoxy. Our warranty on all parts is 3 years.

We use lithium ion batteries as they have many benefits over lead acid battery types. The storage/weight ratio of lithium batteries allows us to make larger lighting systems for single poles. Lithium batteries also charge faster, use more of the battery and have a much longer cycle life. The extra cost of a lithium ion battery is easily countered by the saving on the steel and aluminium structures we use to hold and carry our systems. All of our batteries have intelligent Battery Management Systems to ensure high accuracy and safety of charging and discharging.

**The options for installing poles for lighting are:**

**Base Plate Pole:** This pole requires a bolt cage to be submerged into the ground and set in concrete. The Pole is then bolted onto the bolt cage.

**Stepped Pole:** Our stepped poles are inserted directly into the ground and concreted in place. The poles will need to be supported vertically until concrete has set. This installation method is less expensive than a base plate pole.

**Standard Pole:** For some smaller installations, you may use a standard pole. Which is a simple length with no steps or base plate. This pole will also be inserted directly into the ground and concreted in place.

**Wall Pole:** For lighting around buildings, the wall pole is bolted onto the wall, and the light and solar system installed on the pole.

**Installation Options**
